

HEALEY & LORD

Concealed Diverting Valve

For use with Concealed H&L Sequential Shower Mixers

The Healey & Lord concealed diverting valve is for use with concealed shower mixers and directs the water to a fixed overhead shower outlet OR to a moveable shower head using a flexible hose.

It is important to ensure all pipework and the diverting valve are supported using pipe supports and leak tested before use.

Note: The Healey & Lord concealed diverting valve requires a 24mm diameter hole for the control mechanism to be formed in the board into which it is being installed
